

I do not believe that XM Satellite Radio should be restricted in offering Instant Traffic & Weather or for that matter any other "local services" that their subscribers want. I pay a monthly fee for something that I cannot get from local AM/FM broadcasters and I expect these services to be available to me. I think the local AM/FM broadcasters need to try to offer more of what their audiences want and we will soon in. They should not try to stifle competition from an innovative new technology to gain an unfair advantage.

Regards, Anthony Ziemann
